

*A Must-Have California Native Plant!*

# Woodland Strawberry

*Fragaria vesca*

**Description:** This plant makes a lovely groundcover, with lush green foliage, white flowers in spring, and delicious fruit in the summer. It is a great habitat plant as all parts are edible.

**Light:** Partial Shade / Sun

**58** species of butterflies and moths can lay eggs on this plant.

**Featured Butterfly:** The **Two Banded Checkered Skipper** butterfly is shown ‘mud puddling,’ gathering salts and amino acids from damp or muddy soil, a great feature in a habitat garden.

**Keystone Plant:** This California native is a “must have” (host) plant for caterpillars, which, in turn, are the “must have” food for baby birds.
