

***A Must-Have California Native Plant!***

# Oregon White Oak

## *Quercus garryana*

**Description:** Oregon White Oak or Garry Oak can be grown as a tree or shrub. Its large, lobed leaves, which drop in the fall, nourish the soil and provide shelter for caterpillars.

**Light:** Full Sun / Part Shade

**270** species of butterflies and moths can lay eggs on this plant.

**Fun Fact:** *“Oaks support more life forms and more fascinating interactions than any other genus in North America.” Doug Tallamy*

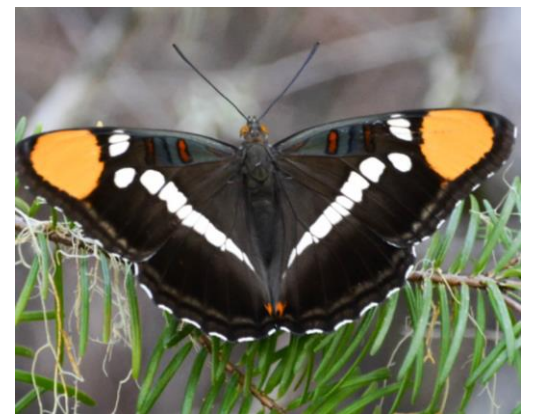

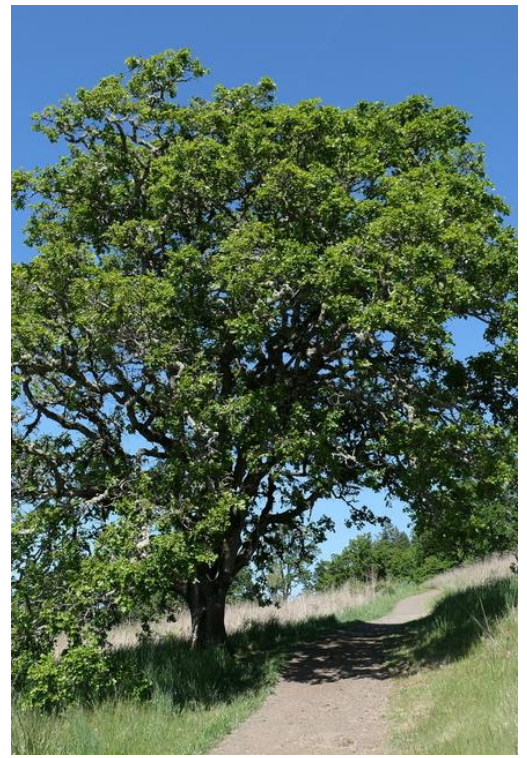

**Featured Butterfly:** In its caterpillar stage, the elegant **California Sister** dines exclusively on oaks and is a vital food source for many species of birds.

**Keystone Plant:** This California native is a “must have” (host) plant for caterpillars, which, in turn, are the “must have” food for baby birds.
